Html | CSS | Javascript | Bootstrap | JQuery | React Js | Node Js | Express Js | Mongo DB

PROJECTS

eCommerce-App

[Live URL](#) | [Github](#)

Cloths ordering website with features like add to cart, create an account, log in and profile updating, and context API for creating all the important functions

- FrontEnd: React, Context API, useReducer, React-Router-Dom, Bootstrap.
- Database: Firebase.

Chat-App

[Live URL](#) | [Github](#)

Real-time Messaging: The app should allow users to send and receive messages in real-time. User Authentication: Users should be able to create an account and log in. This can be done using various authentication methods like email/password using Firebase as a database. Private Chats: The app should support one-on-one private chats. The app should store and display the history of messages for each conversation. The app can show when a message is delivered. The app should allow users to send multimedia messages like images.

- FrontEnd: Front-end: React, Context API, useReducer, React-Router-Dom, Bootstrap,Material UI.
- Database: Firebase.

Quiz-App

[Live URL](#) | [Github](#)

The app should be able to display questions to the user. This can be done by fetching them from an external API.The app can support different types of questions such as multiple-choice, checkbox, input fields, and text areas. The user can select an option as their answer and they can move to the next question. The app should allow the user to navigate between questions. Typically, there are buttons for the user to go to the next or previous question. The app should keep track of the user's previous score and once the current test is completed, it will display the current score. If the user selects the correct answer, their score is incremented. After the user has answered all questions, they should be able to see the score on the home page and also on the profile page. The app should handle complex state objects, manage different state hooks, and render components based on state.

- FrontEnd: React, Context API, useReducer, React-Router-Dom, Bootstrap.
- Database: Firebase.
